Re: Finance Manager, Data Center Planning and Delivery, AWS

Dear AWS Data Center Finance Team,

I'm applying for the Finance Manager, Data Center Planning and Delivery role at AWS. I'm an MBA Finance (STEM) candidate at Fordham Gabelli, and before that I worked at JPMorgan Asset Management, Lenovo and Thomson Reuters. Data center buildout is the part of the AI economy I most want to work on, and a seat that follows capital from planning through construction and commissioning is where the real cost and timing decisions get made.

At Lenovo I built forecasts and scenario analyses on capital allocation that improved capital efficiency by 15%, and ran variance and sensitivity analyses on budget changes for cross-functional teams. For an MBA project I modeled a 6-project, 35.4 MW Illinois solar portfolio, covering capital structure, DSCR, NPV and levered IRR, which taught me how build costs, incentives and timing flow into returns on physical infrastructure. At Thomson Reuters I supported monthly P&L forecasting, variance analysis and close for the ANZ region.

That maps to the forecasting, financial controls and capital tracking the role describes. I haven't worked in construction finance, so I'd start by learning how AWS plans and tracks a data center build. I'm careful with data, quick to find where a number went wrong, and comfortable explaining it to non-finance partners. I'd welcome the chance to talk.

Sincerely,
Sam Dasgupta
